

## **Comtec ViewdataPlus Toolbar** **Installation and Operating Instructions**

If you are using Windows Vista or Windows7 (32-bit or 64-bit) operating system and cannot use the Viewdata emulator on the TTA Viewdata site, please follow the instructions below for an alternative solution.

### **INTERNET EXPLORER 32-BIT VERSION ONLY**

- Download the ViewdataPlus Toolbar from this link (<http://www.viewdataplus.com/Installation/Files/ViewdataPlus10.msi>)
- When prompted, save (**DON'T RUN**) the ViewdataPlus10 installer, run the installer to install the toolbar (note: you may need to temporarily disable your anti-virus program during installation, **YOU DO THIS AT YOUR OWN RISK**)
- Once installed, if you have Internet Explorer installed, close them all and re-open and you should see the ViewdataPlus Toolbar
- Click on the Connect button, on the login screen, click on the Set-up an account link and complete the form (the set-up screen will ask for your agency number as ABTA number but you can use your TTA Number)
- Once you have created your login, you can then use your tour operator supplied passwords
- There is also an admin area for further help

*Note: your anti-virus program may think the toolbar is an adware, if so, then you may need to add the toolbar to your anti-virus programs exclusion list but you do this at your own risk.*

*Windows 8: the toolbar will install but does not work.*
